

## Toolkits Set up page

Use this page to set up Xerte Online Toolkits. The various settings have been grouped into areas depending on what part of the site they effect or change. **Please note that this code comes with management features that will allow you to change all these settings at a later point.**

### Site formatting settings - Customising the first login page

Please see [this screen shot](#) for guidance.

The site url is (This is the URL of the site - changing this will not change the URL)

**WARNING:** If you are installing this via localhost on a server, but wish to provide this service from a URL hosted on this server, please remove localhost from the above textarea and replace it with a url

The site title is (This is the HTML title tag content)

The site name is (This is part of index.php and the RSS and Syndication feeds)

The site logo is (The logo in the top left, as you can currently see - number 3 on the diagram)

The organisational logo is (The logo in the top right, as you can currently see - number 4 on the diagram)

The Welcome message is (number 1 on the diagram)

The site text is (number 2 on the diagram)

The news text is (number 5 on the diagram)

The copyright message (number 6 on the diagram) is

The demonstration page (linked to from number 7 on the diagram) URL is

The form string is (The code to handle the HTML format for the login box, this should only be changed by advanced users - number 8 on the diagram)

### Site formatting settings - Customising the logged in page

The content of pod one is (The first pod underneath the file area on the logged in page)

The content of pod two is (The second pod underneath the file area on the logged in page)

### Server settings - some technical aspects for the site

The HTACCESS setting is (Whether or not you are using a .htaccess file on the site - the apache config must allow for overrides)

The PHP session name (you do not need to change this unless integrating with another service) is

The integration config path (for use if integrating with other systems is)

The admin username is

The admin password is

**The allowed upload types for the Media and quota page are**

```
text/xml,application/msword,application/x-shockwave-flash,image/jpeg,image/pjpeg,image/png,image/gif,image/x-png,audio/mpeg,application/vnd.ms-excel,application/pdf,application/vnd.ms-powerpoint,video/x-ms-wmv,text/html,video/mp4,video/avi,audio/wav,text/plain,video/quicktime,application/vnd.openxmlformats-officedocument.spreadsheetml.sheet,application/vnd.openxmlformats-officedocument.wordprocessingml.document,application/vnd.openxmlformats-officedocument.presentationml.presentation
```

**RSS Feed and Syndication settings - formatting for the RSS feeds and for the syndication****The RSS Feed title is**

```
Feed RSS del servidor XOT de luismiglesias.es
```

**The institutional publisher as listed in the syndication feed is**

```
luismiglesias.es
```

**The standard syndication rights for the syndicated content are**

```
Esta obra se encuentra publicada bajo licencia Creative Commons Reconocimiento-NoComercial-CompartirIgual 3.0 España (CC BY-NC-SA 3.0 ES)
- Ver http://creativecommons.org/licenses/by-nc-sa/3.0/es/
```

**The standard syndication license for the syndicated content is**

```
Esta obra se encuentra publicada bajo licencia Creative Commons Reconocimiento-NoComercial-CompartirIgual 3.0 España (CC BY-NC-SA 3.0 ES)
- Ver http://creativecommons.org/licenses/by-nc-sa/3.0/es/
```

**Server paths - where files will be hosted on the server****The module path is**

```
modules/
```

**The website code path is**

```
website_code/
```

**The short file area path is**

```
USER-FILES/
```

**The php library path is**

```
website_code/php/
```

**The root file path is**

```
/homepages/6/d449471299/htdocs/xot/
```

**The import path (where imported files will be processed to check they are valid) is**

```
/homepages/6/d449471299/htdocs/xot/import/
```

**You may wish to move this folder to be outside the webroot****MySQL query string - The default string for many of the sites mysql queries****The play edit preview query is**

```
select " . $xerte_toolkits_site->database_table_prefix . "originaltemplatesdetails.template_name, " .
$xerte_toolkits_site->database_table_prefix . "logindetails.username, " .
$xerte_toolkits_site->database_table_prefix . "originaltemplatesdetails.template_framework, " .
$xerte_toolkits_site->database_table_prefix . "templaterights.user_id, " .
$xerte_toolkits_site->database_table_prefix . "templaterights.folder, " .
$xerte_toolkits_site->database_table_prefix . "templaterights.template_id, " .
$xerte_toolkits_site->database_table_prefix . "templatedetails.access_to_whom from " .
$xerte_toolkits_site->database_table_prefix . "originaltemplatesdetails, " .
$xerte_toolkits_site->database_table_prefix . "templaterights, " .
$xerte_toolkits_site->database_table_prefix . "templatedetails, " .
$xerte_toolkits_site->database_table_prefix . "logindetails where " .
$xerte_toolkits_site->database_table_prefix . "templatedetails.template_type_id = " .
$xerte_toolkits_site->database_table_prefix . "originaltemplatesdetails.template_type_id and " .
$xerte_toolkits_site->database_table_prefix . "templatedetails.creator_id = " .
$xerte_toolkits_site->database_table_prefix . "logindetails.login_id and " .
$xerte_toolkits_site->database_table_prefix . "templaterights.template_id = " .
$xerte_toolkits_site->database_table_prefix . "templatedetails.template_id and " .
$xerte_toolkits_site->database_table_prefix . "templaterights.template_id="TEMPLATE_ID_TO_REPLACE" and
role="creator"
```

**Error handling - where files will be hosted on the server****The error log path is**

The email error list is (Accounts to receive email messages from the error logger)

The error log message is (Set to true to log errors)

The email error message is (Set to true to email errors)

The maximum error size is (The maximum number of entries per error log)

### LDAP handling - where files will be hosted on the server

You can set up multiple hosts by separating entries in each of these fields with the \nstring as a delimiter

The ldap host is

The ldap port is

The ldap password is (this can be left blank for lighter LDAP)

The ldap base is

The ldap bind is

The first LDAP filter is

The second LDAP filter is

### Peer review settings - Customising the peer review page

The Peer form string is (The code to handle the HTML format for the peer review login box)

```
<html><body><center><p><form method="post" action=""><p>Contraseña <input type="password" size="20"
maxlength="36" name="password" /></p><p><input type="image" src="website_code/images
/Btn_LoginOff.gif" onmouseover="this.src='website_code/images/Btn_LoginOn.gif'"
onmousedown="this.src='website_code/images/Btn_LoginClick.gif'"
onmouseout="this.src='website_code/images/Btn_LoginOff.gif'" /></p>
```

### Xerte Settings - some files Xerte uses to work on the server - you do not need to change any of these.

The flash save path is

The flash upload path is

The flash preview check path is

The flash flv skin is

### Email Settings - settings to manage how the site sets up email.

The site email account is

The site email headers is (use the \* symbol to represent a new line '\n')

The site email to add to username is

The site's feedback list is (A semi-colon separated list of email addresses to receive feedback from the feedback page)

### **Web Proxy Settings - settings to manage how the site can connect to the internet for certain Xerte pages.**

The site's proxy host is

The site's proxy port is

By directly editing the rss proxy.php file (in the root folder), you can add up to 4 proxies and ports should you wish.
